## Seek/Scan Actions (motorized tuner)

Seek

Scan

When in radio mode, press the Seek button once to seek to the next station. Double press the Seek button to start a scan. The radio will scan to the next station, pause and then continue until any button/action is executed.

## Auto Scan Action (standard tuner)

Start Scan

Stop Scan

Cancel Scan

When in radio mode, double twist the tuning knob to start a scan. (The dial pointer will not move while scanning) To stop on a station, turn the tuning knob as shown. The station will be temporarily stored. To find the actual station on the dial, turn the tuning knob within 5 seconds of stopping the scan. When turning the dial in the correct direction towards the station, the radio will mute until the station is found.

## Status Voice Assist HD Action

In radio mode, this action will announce the frequency and optionally the channel ID for the current station. In other modes it will announce which input is currently active. (BT phone:streaming/USB/Aux)

## Advanced Actions

**Signal Strength:** In radio mode, While the *Voice Assist HD* is speaking the station information, performing this action again will start a Signal Strength readout. To end, perform action again or tune off station.

**Version:** This action will announce the firmware version of the FMR and any installed optional card.
